Darken the circle if the answer is yes:

- Smoke?  Live alone?  
 Drink alcohol more than six (6) drinks per week?  Wear sunscreen regularly?  
 Currently work? Occupation: \_\_\_\_\_  Tan regularly (booth or outdoors)?

Why we ask: In dermatology, many conditions may be related to work exposures such as chemicals or intense sun. Also, recuperation from some medical or cosmetic procedures may interfere with work related tasks or public appearances. In addition, patients who live alone may need to have skin exams more frequently if we are following lesions on the back, or may need assistance with dressing changes after a procedure.
